Research Study Investigates Concussion and Brain Health in Older Adults 65+

Research Goals:

**Investigate** how structural changes in the brain correlate to cognitive decline

**Collect** and analyze fluid biomarkers for the detection of inflammation and Alzheimer’s disease

**Examine** the relationship between concussion and the aging process

Participants will receive:

- Snacks and refreshments
- Medical screening; neurological exam
- Optional review of cognitive assessment scores with investigator after completion of 1 year follow-up visit

Have You Had a Concussion in the Past 5 Years?

PI: Bettcher 19-1423

**Location**

- This study involves 2 research visits: a baseline and a one year follow-up visit at the University of Colorado Anschutz Medical Campus.

**You may qualify if you:**

- Are 65 years or older
- Had a concussion within the past 5 years
- Talked with a Doctor about your concussion
- Have not been diagnosed with a memory disorder
